

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

THE PROPOSED NEW SCHOOL BUILDINGS.

proposed additions to the buildings of Medina, for which the people of the district will vote on June 29th, will include a six grade school and a three department Junior High school to be built on the site of the present School and a new six grade school to be built on a plot of land, 100 by 250 feet, fronting on Ensign avenue and running through to Elwood street. The new buildings are to be constructed of re-inforced concrete, faced with buff or tapestry brick and trimmed with white stone. The architects are Pierce & Bickford of Elmira whose work on many school buildings throughout the state has especially fitted them to design school structures which may be erected at a minimum cost and which will meet all the requirements of the modern school.

Because of the ruling of the state department that the Central school could not be remodeled or improved in any way except under plans recommended by the state department, the cost of which work would approximate \$35,000, the attempts of the board to utilize the old building have failed and it will be torn down and the material and equipment used as far as possible in the new structures.

The proposed building which will front on Pearl street will be in reality two separate schools. The North end will be devoted to a six grade school of the most modern construction and equipment, while the south portion of the building will house the proposed Junior High school, which is merely a combination of the seventh and eighth grades with the High school freshmen class as a separate section of the High school. This will include also a fine room for the school library with a separate entrance on the South Academy street and superintendent's office, board of education office, etc. On the ground floor there will be a gymnasium, 40x70 feet in size, with shower bath and locker rooms as well as several class rooms. The combined study hall and assembly room will be on the next floor above, directly over the gymnasium and extending through to the roof. It will be lighted from the South side and from the sky-lights, and will accommodate desks for 250 pupils with a seating capacity in orchestra chairs to take care of an audience

Part of this number will be accommodated in a large balcony. The assembly room will have a small stage without scenery.

There are also, on this floor, various class rooms and locker rooms. The remainder of the top floor will be devoted to class rooms. The library room will have stacks for 6500 volumes. The district has at present about 3300 volumes, a fact which is not as generally appreciated by the residents of the districts as it should be.

Each grade and the Junior High school department is provided with individual, ventilated lockers for the students, and toilets are provided on each floor. The heating in all of the buildings will be combined with the Plenum system of ventilation whereby air is drawn from the outside, forced over tempering and moistening coils and then into each room in the building, with a separate thermostat to regulate the heat in each room. The foul air is forced out of ventilating ducts in the walls. By the throwing of a single lever all of these ducts can be closed the moment school is closed, which greatly cheapens the coal expense.

The board of education has seen, in process of construction and completed, buildings at Elmira, Towanda, Penna., and other points, similar to the buildings designed for Medina, and the members are enthusiastic in praise of their beauty.

The gymnasium will be thoroughly equipped to comply with the recently passed state law requiring physical education in the schools and is provided with paneled sliding doors in the walls which will make the corridors available for spectators at exhibition drills and games. The roof will be of reinforced concrete and may be used for open air schools when it is deemed desirable to install them.

The East side school will replace the Laurel Hill school and the Elizabeth street school and will accommodate six grades, relieving the 5th and 6th grades of the Central and Oak Orchard street schools, as many scholars now walk from the East side to these other schools. This building will also be constructed of re-inforced concrete, faced with buff or tapestry brick, with white stone trimmings and will have eight rooms which will provide for future growth, it is believed, for twenty years.

The building will also be so constructed that additions on the back may be made at any time without a general remodeling. The heating and ventilation will be the same as the Junior High school building; there will be a toilet on each floor and individual ventilated lockers, also teachers rest rooms and a principal's office.

The system as designed will give the district three six grade schools in different sections of the town, gathering the 7th and 8th grade pupils from all parts of the town into the Junior High school. This system does not mean the introduction of any new fads, but rather a re-arrangement of the working conditions of the schools.

FOREWORD

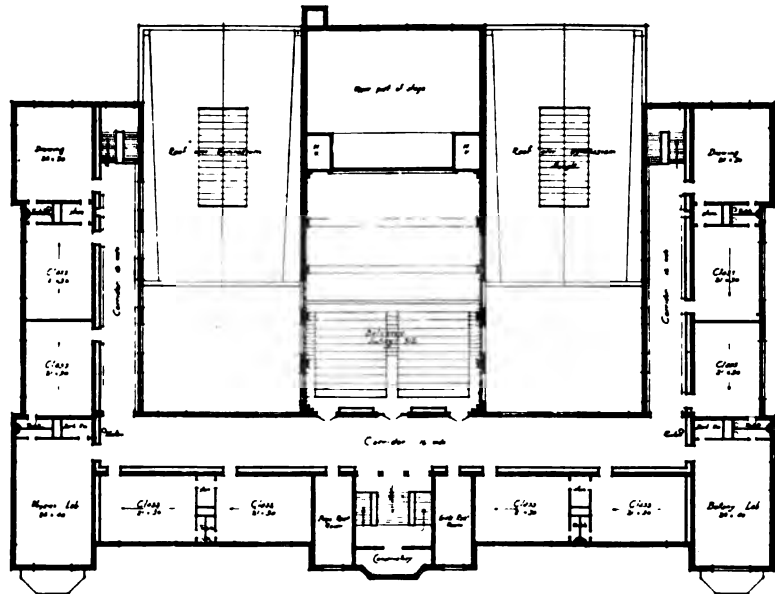

IN gathering and selecting plans and photographs for this book the compiler has followed the principles adopted in the previous volume on "High School Buildings." The aim has been to present a wide variety of buildings which show an adaptation of the plan to the educational work carried on in them and which are characterized by economy and convenience and a careful regard for sanitation, lighting, etc. Preference has been given to buildings distinguished by simple and substantial, rather than ornate, architectural treatment.

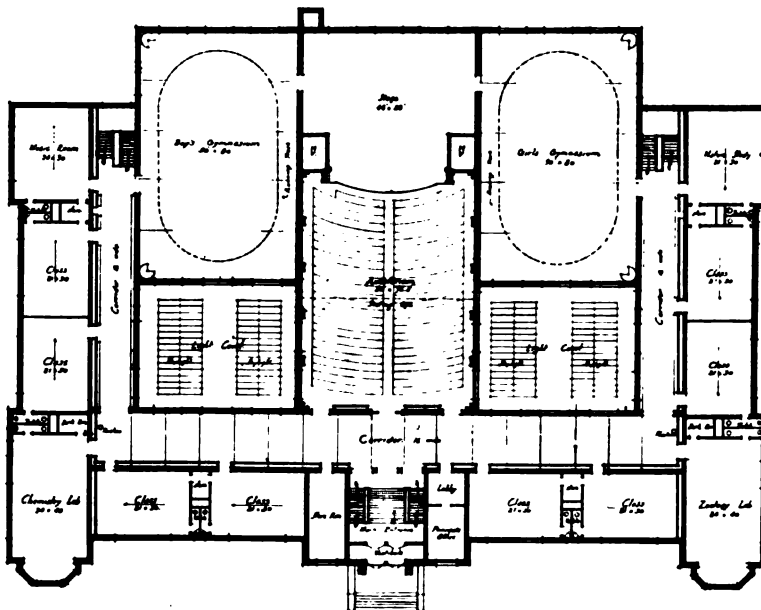

The list of buildings includes the work of a majority of the official school architects of the United States and of many of the leading men and firms who are specializing in schoolhouse work. To all the compiler extends his sincere thanks.
